Raul B. Barquilla Jr.

AI and Full-Stack Engineer

Albay, Philippines | raulbarquilla003@gmail.com | +63 906 473 2078

Portfolio: raulbarquilla-portfolio.vercel.app | GitHub: github.com/hakkuuuu | LinkedIn: linkedin.com/in/raulbjr

PROFESSIONAL SUMMARY

AI and full-stack engineer who builds production systems end to end: agentic AI on Claude and GPT, CRM and lead pipeline integrations, and the secure infrastructure they run on. Works in TypeScript across Next.js, React, Node.js and PostgreSQL. Currently owns the full IT function at Pandr Outsourcing, from shipping internal and client systems to serving as the Level 3 escalation point for hardware, software and IT assets.

SKILLS

AI Engineering: Claude, Anthropic API, OpenAI GPT, Agentic AI Systems, Prompt Engineering, LLM Token and Cost Management

Architecture and Security: System Architecture, Authentication Tokens and Sessions, JWT, OAuth, Webhook Signature Verification, Idempotency, Application Security

Infrastructure and DevOps: CI/CD Pipelines, Docker, VPS Administration, OVHcloud, SSH, Vercel, Render, Railway

Languages and Frameworks: TypeScript, JavaScript, Next.js, React, Node.js, Express, Laravel

Databases: PostgreSQL, MongoDB, Supabase

Integrations: Salesforce, HubSpot, Aircall, Mattermost, Resend, Svix, REST APIs

IT Operations: Level 3 Troubleshooting, Hardware Support, Software Support, IT Asset Management

Tools: Git, GitHub, Postman, Bruno, DBeaver, Vitest, ESLint, Figma, ClickUp

WORK EXPERIENCE

IT Specialist

Pandr Outsourcing | Legazpi, Albay | July 2026 - Present

- Own the IT function end to end: build the internal and client systems the business runs on, and act as the Level 3 escalation point for hardware, software and integration failures.
- Shipped more than five production systems for internal teams and confidential clients.
- Built a lead intake service that turns inbound lead emails into Salesforce CRM records, with webhook signature verification, parsing and routing modules, a PostgreSQL lookup layer with atomic round-robin assignment and idempotency keys, Salesforce duplicate detection, fallback notification emails, an authenticated admin console, and a hermetic test suite.
- Built an outbound go-to-market (GTM) pipeline and its dashboard, with saved-search lead sourcing and enrichment, HubSpot contact sync, Aircall integration for calling leads, a pre-send approval queue, suppression handling, and per-inbox send throttling against a daily ceiling.
- Built an admin portal for a client to manage products, agents and support tickets.
- Built an internal ticketing dashboard and a chatbot that runs in the team Mattermost workspace.
- Run IT asset management across the office, including inventory, check-out and check-in, repair tracking and disposal.

Web Developer and Team Lead

Think and Clack (Freelance) | Remote | July 2024 - February 2026

- Built a school administration dashboard with user management, organization and event proposal workflows, leaderboards, and real-time statistics for administrative decisions.
- Built a clinic management system for student medical records, visits, histories and vital signs, with role-based access for clinic staff and SMS alerts to guardians based on case severity.
- Led frontend development in Next.js, React and Material UI with fully responsive interfaces, and contributed Laravel REST endpoints, request validation, authentication checks and business logic.
- Tested APIs with Postman and Bruno, and debugged database interactions with DBeaver to keep data flow reliable.
- Led the team by assigning and tracking work in ClickUp, coordinating co-developers, and turning client requirements into features delivered on schedule.

PROJECTS

Travelis (Next.js, TypeScript, MongoDB, Docker)

- Full-stack travel booking platform with JWT authentication and role-based access, destination search with availability checks, and an admin dashboard with analytics. Containerized with Docker and deployed on Render.

HakoStore (PostgreSQL, Express, React, Node.js)

- PERN inventory and e-commerce app with product CRUD, image upload, filtering and pagination. Backend hardened with Helmet and Arcjet rate limiting, with PostgreSQL on Neon.

Hakomerch (MongoDB, Express, React, Node.js, Docker)

- MERN merchandise platform with a modular REST API, secure image uploads with Multer, environment-based configuration and Docker-based deployment.

Hakomovies (React, TypeScript, Tailwind CSS, TMDB API)

- Movie browser with trending lists, title search and detail pages, deployed on Vercel.

EDUCATION

Bachelor of Science in Computer Science

Bicol University | Daraga, Albay | Graduated July 2023

- GPA 1.9204. Dean's Lister for 3 terms (2021 - 2023).
- Thesis: Classification of Emergency-Type Texts using Machine Learning. Built the Android app and deployed the best-performing model (SVM, 94 percent accuracy) on-device with TensorFlow Lite.

ADDITIONAL INFORMATION

- Soft Skills: Problem solving, clear communication, team collaboration, decision making, time management, and working independently with minimal supervision.
- Languages: English, Filipino, Bikol
- Character references available upon request.
